Environmental Applications of Biochar

Message from the Guest Editors

Biochar is a carbon-rich material produced from pyrolysis of biomass. Research in this field is growing exponentially due to the large number of applications. Biochar properties can be modified during or post-pyrolysis in order to engineer it for a number of uses. Most literature on biochar deals with its use in soil for carbon sequestration, remediation of polluted land, and improving soil fertility. Biochar can be used for wastewater remediation and as a replacement for growing media in horticulture. Emerging research is available in other fields, including catalysis and construction. The focus of this Special Issue is the use of biochar in soil, but contributions are not limited to this topic, and quality research in the abovementioned topics will be relevant for the scope of the Special Issue.

Keywords:

- biochar
- remediation
- soil pollution

About the Journal

Message from the Editor-in-Chief

As the world of science becomes ever more specialized, researchers may lose themselves in the deep forest of the ever increasing number of subfields being created. This open access journal Applied Sciences has been started to link these subfields, so researchers can cut through the forest and see the surrounding, or quite distant fields and subfields to help develop his/her own research even further with the aid of this multi-dimensional network.

Editor-in-Chief

Prof. Dr. Giulio Nicola Cerullo
Dipartimento di Fisica, Politecnico di Milano, Piazza L. da Vinci 32,
20133 Milano, Italy

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), Ei Compendex, Inspec, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Engineering, Multidisciplinary) / CiteScore - Q1 (General Engineering)
