Biological and Chemical Control of Pests in Agriculture and Stored Environments

Message from the Guest Editor

Stored-product protection is heavily based on the use of two main categories of insecticides: fumigants and residual insecticides. In agriculture, the main type of insecticide is the chemical. Integrated pest management methods need to be developed to avoid the widespread use of insecticides and to minimize the effects on non-target organisms. Studies on approaches, including the use of beneficial insects and entomopathogens (fungi, viruses, bacteria, nematodes, protozoa) follow this direction in agriculture and stored environments.

About the Journal

Message from the Editor-in-Chief

As the world of science becomes ever more specialized, researchers may lose themselves in the deep forest of the ever increasing number of subfields being created. This open access journal *Applied Sciences* has been started to link these subfields, so researchers can cut through the forest and see the surrounding, or quite distant fields and subfields to help develop his/her own research even further with the aid of this multi-dimensional network.

Editor-in-Chief

Prof. Dr. Giulio Nicola Cerullo
Dipartimento di Fisica, Politecnico di Milano, Piazza L. da Vinci 32,

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), Ei Compendex, Inspec, Embase, CAPIus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Engineering, Multidisciplinary) / CiteScore - Q1 (General Engineering)
