Fuzzy Control Systems: Latest Advances and Prospects

Message from the Guest Editor

As a branch of modern control theory, fuzzy control plays a very important role today. In recent years, it has achieved relatively long-term development. It has not only played an important role in industry, national defense, medicine, prediction, engineering design, information processing, and sociology, but has also led to rapid development in the fields of environmental protection and energy conservation, psychology and finance. Cloud model theory is also a branch of fuzzy control arising in the field of artificial intelligence in the past decade, and has made considerable progress in the field of virtual reality and intelligent control. In addition, fuzzy reasoning is one of the core aspects of fuzzy logic, affective computing, machine learning, image processing, granularity computing, collaborative computing and other fields. This Special Issue aims to explore new progress in fuzzy control systems, including theoretical and practical innovation. About the Journal

Message from the Editor-in-Chief

As the world of science becomes ever more specialized, researchers may lose themselves in the deep forest of the ever increasing number of subfields being created. This open access journal Applied Sciences has been started to link these subfields, so researchers can cut through the forest and see the surrounding, or quite distant fields and subfields to help develop his/her own research even further with the aid of this multi-dimensional network.

Editor-in-Chief

Prof. Dr. Giulio Nicola Cerullo
Dipartimento di Fisica, Politecnico di Milano, Piazza L. da Vinci 32,
20133 Milano, Italy

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), Ei Compendex, Inspec, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Engineering, Multidisciplinary) / CiteScore - Q1 (General Engineering)
