

Special Issue

Intelligent Centralized and Distributed Secure Edge Computing for Internet of Things Applications ☒

Message from the Guest Editors

For the best provision of smart IoT services with edge and cloud computing environments, efficient and intelligent centralized and distributed computing algorithms should be developed.

This Special Issue “Intelligent Centralized and Distributed Secure Edge Computing for Internet of Things Applications II” aims (i) to reflect recent developments in intelligent distributed and centralized controls and algorithms for edge and cloud computing-based IoT (ECI) services, and (ii) to identify critical issues and propose new guidelines that enable the development of future ECI services.

Submissions are expected to focus on both the theoretical aspects and the algorithm and application development of centralized and distributed edge and cloud computing. New ideas proposing disruptive approaches are also welcome.

About the Journal

Message from the Editor-in-Chief

As the world of science becomes ever more specialized, researchers may lose themselves in the deep forest of the ever increasing number of subfields being created. This open access journal Applied Sciences has been started to link these subfields, so researchers can cut through the forest and see the surrounding, or quite distant fields and subfields to help develop his/her own research even further with the aid of this multi-dimensional network.
