

# Special Issue

## Circulating Biomarkers

### Message from the Guest Editor

In this Special Circulating Biomarkers Issue, we will explore how technologies are refined to investigate established and novel biomarkers from liquid biopsies. We aim to determine and review how well these techniques are implemented in the clinics, with future perspectives on how the research field and clinical applications may develop. Last but not least, we will look at how circulating biomarkers can translate into patient management and disease outcomes and how well they compare on a health economic level with current alternatives.

The science considered here is inclusive and does not aim to restrict authors but rather to open up the Special Issue to as wide an audience as possible. Technical articles progressing recent advances in methodologies are welcome, while biological and medical studies that translate understanding of circulating biomarkers into clinical settings are equally encouraged.

Assoc. Prof. Therese Becker

## About the Journal

### Message from the Editor-in-Chief

As the world of science becomes ever more specialized, researchers may lose themselves in the deep forest of the ever increasing number of subfields being created. This open access journal Applied Sciences has been started to link these subfields, so researchers can cut through the forest and see the surrounding, or quite distant fields and subfields to help develop his/her own research even further with the aid of this multi-dimensional network.

### Author Benefits

#### Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

#### High Visibility:

indexed within Scopus, SCIE (Web of Science), Ei Compendex, Inspec, CAPlus / SciFinder, and other databases.

#### Journal Rank:

JCR - Q2 (Engineering, Multidisciplinary) / CiteScore - Q1 (General Engineering )
