Special Issue

Diagnosis and Treatment of Periodontal Diseases

Message from the Guest Editors

Periodontal disease is one of the most prevalent affections worldwide. Periodontal inflammation has, most frequently, a chronic character and is caused by immune responses against various types of gramnegative anaerobic bacteria, such as P. ainaivalis, T. forsythia. T. denticola and A. actinomycetemcomitans. Diagnosis of periodontal disease is a complex one, and it involves, in addition to many advanced technologies and techniques, the accurate evaluation of the general status of the patient. Treatment of different types of periodontal disease has become a challenge for the clinician, as protocols are improved continuously. The therapeutic protocols are very diverse and include many avant-garde and minimally invasive solutions. This is why expert opinions are needed to optimize the use of advanced technologies in the clinical setting. This Special Issue welcomes both original and review articles regarding advances in methods of periodontal diagnosis and also new approaches in therapeutic management.

About the Journal

Message from the Editor-in-Chief

As the world of science becomes ever more specialized, researchers may lose themselves in the deep forest of the ever increasing number of subfields being created. This open access journal *Applied Sciences* has been started to link these subfields, so researchers can cut through the forest and see the surrounding, or quite distant fields and subfields to help develop his/her own research even further with the aid of this multi-dimensional network.

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), Ei Compendex, Inspec, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Engineering, Multidisciplinary) / CiteScore - Q1 (General Engineering)
