

Special Issue

Environmental Geochemistry and Medical Geology

Message from the Guest Editor

Environmental geochemistry and medical geology are multidisciplinary units of the Earth sciences linked to the study of natural and anthropogenic materials and their potential direct and indirect impact on the environment and human and animal health. This covers a wide range of materials such as dust, gas (e.g. Rn), water, and soil, that may have a beneficial or detrimental influence.

Published papers will deal with both beneficial and adverse outcomes of geogenic and anthropogenic materials and their association with environmental and health effects, through experimental and theoretical methods. The full experimental details must be provided so that results can be reproduced. This Special Issue is an opportunity to discuss recent advances in environmental geochemistry and medical geology by providing reports on studies conducted worldwide.

Review papers are also welcome.

Keywords

- environmental geochemistry
- medical geology
- earth sciences
- geogenic and anthropogenic materials

About the Journal

Message from the Editor-in-Chief

As the world of science becomes ever more specialized, researchers may lose themselves in the deep forest of the ever increasing number of subfields being created. This open access journal *Applied Sciences* has been started to link these subfields, so researchers can cut through the forest and see the surrounding, or quite distant fields and subfields to help develop his/her own research even further with the aid of this multi-dimensional network.

Editor-in-Chief

Prof. Dr. Giulio Nicola Cerullo

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), Ei Compendex, Inspec, Embase, CAPIus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Engineering, Multidisciplinary) / CiteScore - Q1 (General Engineering)
