Functionally Graded Materials

Message from the Guest Editor

Functionally graded materials are advanced materials with gradual transitions in the microstructure and composition in certain directions, which lead to specific variation in the functional performance with the advantages of smooth transition in thermal stresses and low stress concentration at the interface between dissimilar materials. A specific behavior in a FGM structure can be obtained through the adequate variation of volume fractions of the constituent materials. FGM structures can be efficiently designed to obtain a specific performance or function by changing the spatial gradation in composition, allowing the designer to tailor the required physical and mechanical properties and the corresponding structural behavior. Development of accurate models and efficient optimization techniques applied to the design of FGM structures are important topics of research. The challenges in the development of manufacturing process and materials selection of FGM are major topics of research. Under this perspective, the Special Issue wants to contribute to the field, presenting the most relevant advances in all aspects of this research area.

About the Journal

Message from the Editor-in-Chief

As the world of science becomes ever more specialized, researchers may lose themselves in the deep forest of the ever increasing number of subfields being created. This open access journal *Applied Sciences* has been started to link these subfields, so researchers can cut through the forest and see the surrounding, or quite distant fields and subfields to help develop his/her own research even further with the aid of this multi-dimensional network.

Editor-in-Chief

Prof. Dr. Giulio Nicola Cerullo
Dipartimento di Fisica, Politecnico di Milano, Piazza L. da Vinci 32,
20133 Milano, Italy

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), Ei Compendex, Inspec, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Engineering, Multidisciplinary) / CiteScore - Q1 (General Engineering)
