

## Special Issue

# Analytical Chemistry: Techniques and Applications, 2nd Edition

### Message from the Guest Editors

This Special Issue aims to highlight original research papers, articles, and reviews on recent developments in analytical chemistry, such as electroanalytical, spectroscopic analysis, and mass spectrometry. This Special Issue welcomes articles focusing on instrumentation development, improvements, and applications; new sensors and applications in analyzing and quantifying active principles from different matrices; and the validation and development of analytical methods and methodologies. Thus, articles on analytical chemistry applied to similar areas of science, such as organic chemistry, geosciences, biological sciences, nanotechnology, engineering, and environmental sciences, are encouraged.

## About the Journal

### Message from the Editor-in-Chief

As the world of science becomes ever more specialized, researchers may lose themselves in the deep forest of the ever increasing number of subfields being created. This open access journal *Applied Sciences* has been started to link these subfields, so researchers can cut through the forest and see the surrounding, or quite distant fields and subfields to help develop his/her own research even further with the aid of this multi-dimensional network.

### Author Benefits

#### Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

#### High Visibility:

indexed within Scopus, SCIE (Web of Science), Ei Compendex, Inspec, Embase, CAPIus / SciFinder, and other databases.

#### Journal Rank:

JCR - Q2 (Engineering, Multidisciplinary) / CiteScore - Q1 (General Engineering )
