

Special Issue

New Mitigation Researches for Compound Disasters Based on Interdisciplinary Approaches

Message from the Guest Editor

Natural disasters are occurring frequently around the world. In particular, in recent years, the risk of disasters such as wind and flood damage occurring before and after major disasters (including major earthquakes) has increased, making it essential to take measures against complex disasters. Research and development for responding to such complex disasters is urgently needed. This Special Issue calls for research papers on disaster mitigation targeting complex disasters. For instance, disaster mitigation research using simulations, IT, and observations focusing on cases of earthquakes, earthquakes and tsunamis, earthquakes and foods, floods, disasters and infectious diseases, etc., is welcome.

About the Journal

Message from the Editor-in-Chief

As the world of science becomes ever more specialized, researchers may lose themselves in the deep forest of the ever increasing number of subfields being created. This open access journal Applied Sciences has been started to link these subfields, so researchers can cut through the forest and see the surrounding, or quite distant fields and subfields to help develop his/her own research even further with the aid of this multi-dimensional network.

Editor-in-Chief

Prof. Dr. Giulio Nicola Cerullo
Dipartimento di Fisica, Politecnico di Milano, Piazza L. da Vinci 32,
