

Special Issue

Applications of Industrial Internet of Things (IIoT) Platforms: 2nd Edition

Message from the Guest Editor

This Special Issue will promote state-of-the-art research, covering all aspects of IIoT applications, including the following topics: industrial protocols, cyber-physical processes and systems, M2M interactions, decision and process levels, implementation, and the testing of intelligent industrial applications; smart algorithms or management processes, human-machine or robotic interactions (HRIs), and augmented virtual and mixed reality or interactive control interfaces; and, finally, Industry 4.0-applicable cases and Industry 5.0-resilient and human-centric appliances. High-quality contributions addressing any related theoretical and practical aspects are welcome, and topics of interest for this Special Issue will include, but not be limited to, those contents.

About the Journal

Message from the Editor-in-Chief

As the world of science becomes ever more specialized, researchers may lose themselves in the deep forest of the ever increasing number of subfields being created. This open access journal *Applied Sciences* has been started to link these subfields, so researchers can cut through the forest and see the surrounding, or quite distant fields and subfields to help develop his/her own research even further with the aid of this multi-dimensional network.
