

## Special Issue

# Optimization and Research Progress of Pumped Storage System

### Message from the Guest Editor

Pumped storage systems are deemed to be a mature economic and large-scale feasible solution to storing energy in an efficient way compared to other technologies such as supercapacitors or electrochemical batteries. In addition, they can participate in ancillary services markets, offering regulating frequency reserve and enlarging their expected incomes. However, their high investment costs could be a barrier to commissioning new projects. In the context of liberalized electricity systems, the participation of pumped storage systems in a multi-market framework becomes critical to improving their economic viability. In this Special Issue on the 'Optimization and Research Progress of Pumped Storage Systems', I invite authors to submit papers on the current trends and challenges of the technology under the uncertainty brought on by climate change.

## About the Journal

### Message from the Editor-in-Chief

As the world of science becomes ever more specialized, researchers may lose themselves in the deep forest of the ever increasing number of subfields being created. This open access journal Applied Sciences has been started to link these subfields, so researchers can cut through the forest and see the surrounding, or quite distant fields and subfields to help develop his/her own research even further with the aid of this multi-dimensional network.

### Author Benefits

#### Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

#### High Visibility:

indexed within Scopus, SCIE (Web of Science), Ei Compendex, Inspec, CAPlus / SciFinder, and other databases.

#### Journal Rank:

JCR - Q2 (Engineering, Multidisciplinary) / CiteScore - Q1 (General Engineering )
