Foot and Ankle Fractures: Diagnostic Methods and Surgical Techniques

Message from the Guest Editors

Foot and ankle fractures have a very high incidence, which is one of the many reasons so many articles are published on this topic every year. Although the diagnostic methods and the treatment techniques have had a continuous improvement over the years, it is still a matter of debate what the correct indications for diagnostic imaging investigations, indications for surgery, and most suitable surgical techniques are. The purpose of this Special Issue is to provide an update on fractures whose diagnosis and treatment are not yet well standardized, mainly referring to the most recent surgical techniques and diagnostic imaging procedures, with the aim of providing the reader with an overview of the novelties in this field. The issue will also deal with the problem of osteoporosis, which is one of the most important predisposing factors in ankle fractures.

About the Journal

Message from the Editor-in-Chief

As the world of science becomes ever more specialized, researchers may lose themselves in the deep forest of the ever increasing number of subfields being created. This open access journal *Applied Sciences* has been started to link these subfields, so researchers can cut through the forest and see the surrounding, or quite distant fields and subfields to help develop his/her own research even further with the aid of this multi-dimensional network.

Editor-in-Chief

Prof. Dr. Giulio Nicola Cerullo
Dipartimento di Fisica, Politecnico di Milano, Piazza L. da Vinci 32,
