

Special Issue

Applied Interdisciplinarity Medical Areas in Maintaining Oral Health

Message from the Guest Editor

In order to maintain a good oral health, it is important for several medical fields to be involved. Indeed, maintaining a good oral health actually includes interdisciplinary, preclinical, clinical, and biochemical areas. In this Issue, we aim to provide an overview of the progress achieved through the interdisciplinarity of medical and clinical practice, underlining the aspects of all solutions. We aim to investigate the current availability of interdisciplinary areas in dentistry, contemporary trends, and clinical and biochemical applications in the dental field for maintaining a good oral health. Topics include research on biocompatibility, dental material, interaction with dental tissues, clinical and biochemical application, rehabilitation of oral health, and improvements to existing procedures in every aspect of contemporary dentistry. The scope of this number includes the following aspects and their relationship to the dental area:

- Dental materials and applications
- Microbiology of dental materials
- Oral rehabilitation
- Stomatognathic diseases
- Biomaterials
- Clinical and biochemical investigations at oral level
- Therapy in dentistry
- Radiology in dentistry

About the Journal

Message from the Editor-in-Chief

As the world of science becomes ever more specialized, researchers may lose themselves in the deep forest of the ever increasing number of subfields being created. This open access journal Applied Sciences has been started to link these subfields, so researchers can cut through the forest and see the surrounding, or quite distant fields and subfields to help develop his/her own research even further with the aid of this multi-dimensional network.

Editor-in-Chief

Prof. Dr. Giulio Nicola Cerullo
