Nano-Structure Modified Biomaterial

Message from the Guest Editors

In recent years, implant treatment has become an indispensable option for the treatment of tooth defects. To shorten the treatment period, which is one of the problems of implant treatment, the surface of various implant materials is being modified worldwide. Currently, research is underway on bone differentiation and surface modification for the attachment of periodontal tissue and soft tissue, but, the goal of research on the modification of implant material has not yet been reached. Therefore, in this section, we would like to call for papers on various research themes focusing on nanostructure control of the material surface. **Keywords**

- Nanostructure
- Implant Material
- Titanium
- Zirconia
- Peek
- In Vitro Test

About the Journal

Message from the Editor-in-Chief

As the world of science becomes ever more specialized, researchers may lose themselves in the deep forest of the ever increasing number of subfields being created. This open access journal Applied Sciences has been started to link these subfields, so researchers can cut through the forest and see the surrounding, or quite distant fields and subfields to help develop his/her own research even further with the aid of this multi-dimensional network.

Editor-in-Chief

Prof. Dr. Giulio Nicola Cerullo
Dipartimento di Fisica, Politecnico di Milano, Piazza L. da Vinci 32,

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), Ei Compendex, Inspec, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Engineering, Multidisciplinary) / CiteScore - Q1 (General Engineering)
