

## Special Issue

# Applications of Supply Chain Designs in Renewable Energy and Industrial Systems

### Message from the Guest Editors

Supply chain design is the process of planning, organizing, and managing the method of acquiring materials and transforming them into products, when they are then delivered to the next stage for processing or for use. Such supply chains are of importance in all productive processes, where the transformation of materials in desired products is required. Therefore, improving these supply chains could improve the benefits obtained during these processes. In particular, for renewable energy and industrial systems, improvement in supply chains is necessary. In the case of renewable energy systems, their efficiency could be improved, and in the case of industrial systems, an improvement in terms of profit could be achieved.

## About the Journal

### Message from the Editor-in-Chief

As the world of science becomes ever more specialized, researchers may lose themselves in the deep forest of the ever increasing number of subfields being created. This open access journal Applied Sciences has been started to link these subfields, so researchers can cut through the forest and see the surrounding, or quite distant fields and subfields to help develop his/her own research even further with the aid of this multi-dimensional network.

### Author Benefits

#### Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

#### High Visibility:

indexed within Scopus, SCIE (Web of Science), Ei Compendex, Inspec, CAPlus / SciFinder, and other databases.

#### Journal Rank:

JCR - Q2 (Engineering, Multidisciplinary) / CiteScore - Q1 (General Engineering )
