Advances in Earth Science at Plate Convergent Zones

Message from the Guest Editors

Plate convergent zones are the most active tectonic settings on the Earth surface. The majority of seismicity, volcanism, and orogenesis is distributed in these regions. Various plate evolutionary processes at convergence zones have been observed and interpreted by interdisciplinary geoscientific studies, including geological, geophysical, geochemical, and geodynamic studies, which provide comprehensive insights into enigmatic plate convergent systems. In this Special Issue, original research reviews and perspectives that describe recent advances and case studies on the Earth Sciences at the plate convergent zones are welcomed.

Guest Editors

Dr. Yingfeng Ji
Dr. Licheng Wang

About the Journal

Message from the Editor-in-Chief

As the world of science becomes ever more specialized, researchers may lose themselves in the deep forest of the ever increasing number of subfields being created. This open access journal *Applied Sciences* has been started to link these subfields, so researchers can cut through the forest and see the surrounding, or quite distant fields and subfields to help develop his/her own research even further with the aid of this multi-dimensional network.

Editor-in-Chief

Prof. Dr. Giulio Nicola Cerullo
Dipartimento di Fisica, Politecnico di Milano, Piazza L. da Vinci 32,
20133 Milano, Italy

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), Ei Compendex, Inspec, Embase, CAPIus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Engineering, Multidisciplinary) / CiteScore - Q1 (General Engineering)
