New Frontiers in Separation of Heavy Metals: Removal from Industrial Wastewaters and Contaminated Soil

Message from the Guest Editors

With the development of modern industry, the demand for heavy metal resources is also gradually increasing. At present, the most widely used heavy metals are mercury, arsenic, copper, zinc, chromium, nickel, and cobalt. As a consequence, heavy metal pollution of industrial wastewater and the soil has become a serious environmental problem. Therefore, the removal of heavy metals from industrial wastewater and the development of feasible remediation technologies for soil contaminated with heavy metals are urgently needed. This Special Issue of the journal *Applied Sciences*, “New Frontiers in the Separation of Heavy Metals: Removal from Industrial Wastewater and Contaminated Soil”, aims to attract novel contributions covering a wide range of applications in separating heavy metals from wastewater and soil.

About the Journal

Message from the Editor-in-Chief

As the world of science becomes ever more specialized, researchers may lose themselves in the deep forest of the ever increasing number of subfields being created. This open access journal *Applied Sciences* has been started to link these subfields, so researchers can cut through the forest and see the surrounding, or quite distant fields and subfields to help develop his/her own research even further with the aid of this multi-dimensional network.

Editor-in-Chief

Prof. Dr. Giulio Nicola Cerullo
Dipartimento di Fisica, Politecnico di Milano, Piazza L. da Vinci 32,
20133 Milano, Italy

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), Ei Compendex, Inspec, Embase, CAPIus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Engineering, Multidisciplinary) / CiteScore - Q1 (General Engineering)
