## Structural Response in Transient Winds of Hurricane and Non-synoptic Events

### Message from the Guest Editors

Nonstationary features of extreme winds (e.g., during hurricane or non-synoptic events) and their associated transient aerodynamics present significant importance for the accurate modeling of wind-induced effects on structures; however, they are neither fully understood nor well captured by state-of-the-art analysis procedures. Hence, there is a need to gain a better understanding of the nature of non-synoptic winds and hurricanes (characteristic of wind inputs) and transient wind load effects (from wind inputs to load outputs). In addition, the transient bluff-body aerodynamics may result in some unique structural response features. This Special Issue aims to collect submissions on the recent numerical and experimental advances in nonstationary wind simulation, modeling of transient bluff-body aerodynamics, and analysis of transient wind-induced structural response. Case studies describing applications of novel technologies to the windresistance design of structures and bridges are also welcome.

# About the Journal

## Message from the Editor-in-Chief

As the world of science becomes ever more specialized, researchers may lose themselves in the deep forest of the ever increasing number of subfields being created. This open access journal Applied Sciences has been started to link these subfields, so researchers can cut through the forest and see the surrounding, or quite distant fields and subfields to help develop his/her own research even further with the aid of this multi-dimensional network.

#### Editor-in-Chief

Prof. Dr. Giulio Nicola Cerullo Dipartimento di Fisica, Politecnico di Milano, Piazza L. da Vinci 32, 20133 Milano, Italy

#### **Author Benefits**

#### **Open Access:**

free for readers, with article processing charges (APC) paid by authors or their institutions.

### High Visibility:
