

Topical Collection

Advanced Technologies, Methods, and Systems for Sustainable Global Networks

Message from the Collection Editor

Over the history of evolution, the satisfaction of needs has had varied responses. However, the world of the 21st century is one in which the basic needs of millions of human beings are still not satisfied. Therefore, there is an urgent need, with regard to both research and the real world, to develop technological solutions to improve the management of industrial and service companies to increase their adaptability to face any potential future event. The aim of this Topic Collection is to develop integrated approaches to increase the organizational capabilities and to apply new industrial organization models to deal with current and future challenges. This Topic Collection seeks to encourage researchers and practitioners to submit their abstracts and papers that relate to the broad, multidisciplinary topic of Industrial Organization (e.g., road mapping and strategy, smart manufacturing, industrial sustainability, sustainable product and services, circular economy, supply chain optimization, new technologies, among others) pertinent to the continuous improvement of industrial and service organizations.

About the Journal

Message from the Editor-in-Chief

As the world of science becomes ever more specialized, researchers may lose themselves in the deep forest of the ever increasing number of subfields being created. This open access journal *Applied Sciences* has been started to link these subfields, so researchers can cut through the forest and see the surrounding, or quite distant fields and subfields to help develop his/her own research even further with the aid of this multi-dimensional network.

Editor-in-Chief

Prof. Dr. Giulio Nicola Cerullo
Dipartimento di Fisica, Politecnico di Milano, Piazza L. da Vinci 32,
