

## Special Issue

# Developments and Applications of Dental Materials II

### Message from the Guest Editor

After the first Special Issue, “Developments and Applications of Dental Materials”, we have decided to propose a second issue that will once again bring together specialists in the field to show the latest advances and findings related to the development, characterization, evaluation and applications of various dental materials. For this Special Issue, we welcome submissions of original research and review manuscripts, covering all aspects of the development and modification of materials used in clinical and laboratory dentistry, including their broad range of applications in relation to adhesive dentistry, restorative dentistry, implantology, oral and maxillofacial prosthodontics, orthodontics, periodontics and pediatric dentistry. Both laboratory and clinical research are within the scope of this Special Issue.

## About the Journal

### Message from the Editor-in-Chief

As the world of science becomes ever more specialized, researchers may lose themselves in the deep forest of the ever increasing number of subfields being created. This open access journal Applied Sciences has been started to link these subfields, so researchers can cut through the forest and see the surrounding, or quite distant fields and subfields to help develop his/her own research even further with the aid of this multi-dimensional network.
