

Special Issue

Ship Structures: Design Loads and Reliability Assessment (2nd Edition)

Message from the Guest Editor

We are pleased to announce the second edition of this topic, which aims to focus on the recent developments in design loads and reliability assessment of ship structures. The evaluation of structural response is critical in ship design, for which appropriate design loads must be determined. Experimental or analytical methods have been applied to determine design loads in the past, and, recently, with the development of computers, the motion of ships is predicted through various numerical methods, and the loads for the design are determined using this method. In addition, despite continued efforts, failures in ship structures still occur worldwide. Ship structures are typical dynamic systems, and their safety and reliability must be evaluated in combination, including collision, explosion, grounding, etc. This Special Issue covers all topics related to ship design loads and reliability evaluation. Case studies and review papers on novel engineering applications are welcome.

- ship structures
- design load
- reliability assessment
- ship motion analysis
- ship strength

Guest Editor

Dr. Jeong-Hyeon Kim

About the Journal

Message from the Editor-in-Chief

As the world of science becomes ever more specialized, researchers may lose themselves in the deep forest of the ever increasing number of subfields being created. This open access journal Applied Sciences has been started to link these subfields, so researchers can cut through the forest and see the surrounding, or quite distant fields and subfields to help develop his/her own research even further with the aid of this multi-dimensional network.

Editor-in-Chief

Prof. Dr. Giulio Nicola Cerullo
Dipartimento di Fisica, Politecnico di Milano, Piazza L. da Vinci 32,
20133 Milano, Italy

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), Ei Compendex, Inspec, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Engineering, Multidisciplinary) / CiteScore - Q1 (General Engineering)
