

## Special Issue

# Urban Traffic Signal Control and Future Traffic Environment

### Message from the Guest Editor

With the development of information technology, traffic signal control is moving towards a networked and intelligent era. Networked and intelligent signal control systems can realize the interconnection and intercommunication of on-road signal control equipment and vehicles, and become part of this. A high degree of vehicle–road coordination is the ultimate goal of the development of the new generation of traffic signal control. The purpose of this Special Issue is to show the latest research results of traffic signals, which can guide the development of related research in the field of traffic signals to the direction of networking and intelligence.

## About the Journal

### Message from the Editor-in-Chief

As the world of science becomes ever more specialized, researchers may lose themselves in the deep forest of the ever increasing number of subfields being created. This open access journal Applied Sciences has been started to link these subfields, so researchers can cut through the forest and see the surrounding, or quite distant fields and subfields to help develop his/her own research even further with the aid of this multi-dimensional network.

### Author Benefits

#### Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

#### High Visibility:

indexed within Scopus, SCIE (Web of Science), Ei Compendex, Inspec, CAPlus / SciFinder, and other databases.

#### Journal Rank:

JCR - Q2 (Engineering, Multidisciplinary) / CiteScore - Q1 (General Engineering )
