

Special Issue

Wind Power Systems: Design, Operation, and Control

Message from the Guest Editor

The penetration of wind power generation has been increasing around the world, bringing about various challenges to the design, operation, and control of power systems. These challenges include the potential congestions on transmission systems, the requirement of system flexibility, forecasting technique, communication and control, frequency regulation and inertia control, cycling of thermal generators, demand management, the revision of grid codes, energy storage systems, and others. Therefore, further development and growth of wind power generation require a continuation of technology improvements to reduce the costs for integrating wind power systems.

This Special Issue focuses on recent research and technology improvements on the design, operation, and control of wind power systems, especially in terms of review articles and practical industry applications in the world.

About the Journal

Message from the Editor-in-Chief

As the world of science becomes ever more specialized, researchers may lose themselves in the deep forest of the ever increasing number of subfields being created. This open access journal Applied Sciences has been started to link these subfields, so researchers can cut through the forest and see the surrounding, or quite distant fields and subfields to help develop his/her own research even further with the aid of this multi-dimensional network.

Editor-in-Chief

Prof. Dr. Giulio Nicola Cerullo
Dipartimento di Fisica, Politecnico di Milano, Piazza L. da Vinci 32,
20133 Milano, Italy

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), Ei Compendex, Inspec, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Engineering, Multidisciplinary) / CiteScore - Q1 (General Engineering)
