

## Special Issue

# Applied Microbiology in Food Technology

### Message from the Guest Editors

Probiotic foods can help to prevent or improve the treatment of physiological disorders (digestive, immune, metabolic, etc.), and they also represent a potential alternative strategy to fight excessive use of antibiotics which can produce antibiotic resistances and result in a high cost. Foods are mostly complex mixtures of macro- and microcomponents organized in a structure that can trap active compounds, modulating their release or inhibiting their activity. This Special Issue focuses on research studies devoted to studying the effect of food technologies on probiotic microorganisms incorporated into a food matrix (liquid, solid or foam). Scientific or review papers addressed at determining the bioaccessibility of probiotic microorganisms after food processing or storage are welcome. Studies to elucidate, via in depth analysis, the interactions among ingredients during fermentation and processing, the determination of the functional properties of the probiotic microorganisms, and their interplay through gastrointestinal passage are topics of special interest.

## About the Journal

### Message from the Editor-in-Chief

As the world of science becomes ever more specialized, researchers may lose themselves in the deep forest of the ever increasing number of subfields being created. This open access journal Applied Sciences has been started to link these subfields, so researchers can cut through the forest and see the surrounding, or quite distant fields and subfields to help develop his/her own research even further with the aid of this multi-dimensional network.

### Author Benefits

#### Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

#### High Visibility:

indexed within Scopus, SCIE (Web of Science), Ei Compendex, Inspec, CAPlus / SciFinder, and other databases.

#### Journal Rank:

JCR - Q2 (Engineering, Multidisciplinary) / CiteScore - Q1 (General Engineering )
