Treatment of Cell Tumor Based on Morpho-Functional and Histology

Message from the Guest Editor

One of the central goals for the treatment of cell tumor is to correlate the cellular morpho-functional status with a drug response and at the same time to detect the possibility of the development of resistance. The objective of this Special Issue is to focus on the efficiency of treatment, exploring histological specific features of the cellular profile, as an integrant component of the precise approach for ulterior tumor treatment strategy.

Based on increasingly accumulating data on histology driven therapy significance for tumor cells, we endorse that it is an actual demand to highlight the prognostic and predictive role of histology.

We consider that new results have to be mentioned to further understand and encourage discussions about the effectiveness of histology in initiating of promising new treatment options, in an adequate cooperation with other specialists.

About the Journal

Message from the Editor-in-Chief

As the world of science becomes ever more specialized, researchers may lose themselves in the deep forest of the ever increasing number of subfields being created. This open access journal *Applied Sciences* has been started to link these subfields, so researchers can cut through the forest and see the surrounding, or quite distant fields and subfields to help develop his/her own research even further with the aid of this multi-dimensional network.
