

Special Issue

Potentially Toxic Elements in Contaminated Soils: Green Remediation Strategies

Message from the Guest Editor

Dear colleagues,

Soil remediation has paramount importance since soil pollution greatly influences the quality of water, food, and human health. In recent years, knowledge of remediation technology has rapidly grown and, at present, many treatment processes appear to be feasible at the field scale. Innovative technologies, largely dependent on soil properties, such as in situ chemical oxidation, electroremediation, and bio- and phytoremediation, etc. have been successfully applied.

In this Special Issue, we invite submissions exploring the development of technologies for “green remediation”, that can tackle the issue of remediation of contaminated soils with the greatest attention to environmental quality, including the preservation of soil productivity. Survey papers and reviews are also welcome.

About the Journal

Message from the Editor-in-Chief

As the world of science becomes ever more specialized, researchers may lose themselves in the deep forest of the ever increasing number of subfields being created. This open access journal *Applied Sciences* has been started to link these subfields, so researchers can cut through the forest and see the surrounding, or quite distant fields and subfields to help develop his/her own research even further with the aid of this multi-dimensional network.

Editor-in-Chief

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), Ei Compendex, Inspec, Embase, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Engineering, Multidisciplinary) / CiteScore - Q1 (Fluid Flow and Transfer Processes)
