Non-Invasive Ventilatory Support Tool as a Bridge in Lung Transplants—Practical Approach and Clinical Evaluation

Message from the Guest Editor

There is great interest in the development of a non-invasive ventilatory support program in patients who are candidates for a lung transplant. This pre-transplant ventilatory approach entails great knowledge of the non-invasive ventilatory support options (non-invasive, nasal high-flow oxygen, negative non-invasive ventilation); these options are essential for a safe bridge to lung transplant. In this Special Issue, we will cover the role of noninvasive ventilatory approaches, methodology aspects, health care programs in candidate for lung transplants to avoiding intubation, improving lung function, and all aspects in the post-transplant period, facilitating extubation, protocols for preventing complications, supporting physiotherapy and recommendation for managing post-reimplantation syndrome.

About the Journal

Message from the Editor-in-Chief

Editor-in-Chief

Prof. Dr. Adam Barczyk

Department of Pneumology, School of Medicine in Katowice, Medical
University of Silesia in Katowice, Katowice, Poland

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid
by authors or their institutions.

High Visibility:

indexed within Scopus, ESCI (Web of Science), PubMed,
MEDLINE, PMC, and other databases.

Rapid Publication:

manuscripts are peer-reviewed and a first decision is
provided to authors approximately 23.3 days after
submission; acceptance to publication is undertaken in 4.5
days (median values for papers published in this journal in
the first half of 2025).
