

## Special Issue

# Advances in Mathematical Models and Computational Intelligence for Transportation System Planning and Management

### Message from the Guest Editors

This Special Issue will contribute to the development and application of mathematical models and computational intelligence for solving varied transportation system planning and management problems at all levels, including but not limited to service network design problems, location problems, routing problems, scheduling problems, supplier selection problems, pricing problems and co-opetition problems. Studies related to transportation planning and management problems considering environmental sustainability or under uncertainty (fuzziness or stochasticity) are especially welcome. We look forward to providing a platform to discuss rigorous mathematical models that formulate transportation system planning and management problems and intelligent algorithms that can efficiently solve them.

We welcome both research articles and review articles on Advances in Mathematical Models and Computational Intelligence for Transportation System Planning and Management.

## About the Journal

### Message from the Editor-in-Chief

---

#### Editor-in-Chief

Prof. Dr. Christos Douligeris  
Department of Informatics, University of Piraeus, 18534 Piraeus,  
Greece

---

#### Author Benefits

##### Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

##### High Visibility:

indexed within Scopus, ESCI (Web of Science), Inspec, Ei Compendex and other databases.

##### Journal Rank:

JCR - Q2 (Engineering, Electrical and Electronic) /  
CiteScore - Q1 (Applied Mathematics)
