

Special Issue

Micro- and Nanoplastics in the Atmosphere

Message from the Guest Editors

This Special Issue cordially invites novel contributions related to the source–transport–sink dynamics of Micro- and nanoplastics (MNPs); interactions with terrestrial and marine systems; degradation and fragmentation mechanisms; methodological advancements in sampling and analysis; and health risk assessments and toxicological evaluations.

About the Journal

Message from the Editor-in-Chief

Continued developments in instrumentation and modeling have driven atmospheric science to become increasingly more complex with a deeper understanding of concepts, mechanisms, and interactions. This is the field that innovation built and it has led to a better appreciation for the complexity with atmosphere. Human life is intertwined in this complexity as we strive to better understand our atmosphere. Climate change is constantly stretching the limits of our thinking and forcing new ideas and concepts to be played out. Welcome to the Anthropocene!
