Special Issue

Airborne Biological Particles: Characterization, Monitoring, and Health Relevance

Message from the Guest Editors

This Special Issue is dedicated to advancing the understanding of bioaerosols and their impacts on human health. Bioaerosols—airborne particles of biological origin—play a significant role in environmental exposures that influence public health outcomes. This Special Issue brings together multidisciplinary research focused on three main areas: bioaerosol characterization, atmospheric monitoring, and exposure risk assessment. You may choose our Joint Special Issue in *Aerobiology*.

About the Journal

Message from the Editor-in-Chief

Continued developments in instrumentation and modeling have driven atmospheric science to become increasingly more complex with a deeper understanding of concepts, mechanisms, and interactions. This is the field that innovation built and it has led to a better appreciation for the complexity with atmosphere. Human life is intertwined in this complexity as we strive to better understand our atmosphere. Climate change is constantly stretching the limits of our thinking and forcing new ideas and concepts to be played out. Welcome to the Anthropocene!

Editor-in-Chief

Dr. Daniele Contini
Institute of Atmospheric Sciences and Climate (ISAC), National Research Council (CNR), Str. Prv. Lecce-Monteroni km 1.2, 73100 Lecce, Italy

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), Ei Compendex, GEOBASE, GeoRef, Inspec, CAPlus / SciFinder, Astrophysics Data System, and other databases.

Journal Rank:

CiteScore - Q2 (Environmental Science (miscellaneous))
