

## Special Issue

# CO<sub>2</sub> Geological Storage and Utilization

### Message from the Guest Editors

Urbanization and industrialization boost the consumption of fossil fuels, which causes enormous CO<sub>2</sub> emissions. Excessive CO<sub>2</sub> in the air can intensify the greenhouse effect, deteriorating the global climate and ecological environment. Carbon capture, utilization, and storage (CCUS) is a kind of technology that can massively reduce CO<sub>2</sub> emissions from industrial processes. Among various CCUS technologies, CO<sub>2</sub> geological storage and utilization has become one major development orientation due to its huge storage scales and potential economic benefits with enhanced oil/gas recovery. We invite you to submit your original research and review manuscripts to this Special Issue entitled *CO<sub>2</sub> Geological Storage and Utilization*. The subjects of the papers may include (but are not limited to): CO<sub>2</sub> injection technology; CO<sub>2</sub> physical/chemical interaction with rocks and other fluids; adsorption/desorption, diffusion, flow behavior, phase behavior of CO<sub>2</sub> and fluids; mechanisms of enhanced oil/gas recovery by CO<sub>2</sub>; and CO<sub>2</sub> leakage monitoring and evaluation.

### Guest Editors

Prof. Dr. Liang Huang

Dr. Dali Hou

Prof. Dr. Qian Sun

Prof. Dr. Yu Yang

### Deadline for manuscript submissions

closed (3 July 2023)

## About the Journal

### Message from the Editor-in-Chief

Continued developments in instrumentation and modeling have driven atmospheric science to become increasingly more complex with a deeper understanding of concepts, mechanisms, and interactions. This is the field that innovation built and it has led to a better appreciation for the complexity with atmosphere. Human life is intertwined in this complexity as we strive to better understand our atmosphere. Climate change is constantly stretching the limits of our thinking and forcing new ideas and concepts to be played out. Welcome to the Anthropocene!

### Author Benefits

#### Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

#### High Visibility:

indexed within Scopus, SCIE (Web of Science), Ei Compendex, GEOBASE, GeoRef, Inspec, CAPlus / SciFinder, Astrophysics Data System, and other databases.

#### Journal Rank:

CiteScore - Q2 (Environmental Science (miscellaneous))
