

Special Issue

State-of-Art in Urban Climate Projections

Message from the Guest Editors

In this Special Issue, we explore scientific advancements of methodologies and tools that can provide logical climate forecasts or projections that adequately consider pathways of land cover changes (or even unprecedented global changes, such as the current COVID-19 pandemic). The expected time scales are from short-term (e.g., weeks, months) to long-term (i.e., decades, centuries), with spatial scales covering anything from cities to the whole planet. The topics of interest include but are not limited to the following:

- Climate change/projection models released or updated within the recent decade;
- Climate projections, or methodologies of such, which consider realistic changes of the land surface;
- Climate projections, or methodologies of such, which consider unprecedented global disasters (e.g., COVID-19);
- Proposals/strategies to forecast changes in the land surface that are climate-induced or vice versa;
- Multiscale downscaling of climate projections;
- Recent developments, implementations, or methodologies in global climate models to estimate future climate projections.

Guest Editors

Dr. Alvin Christopher Galang Varquez

Dr. Makoto Nakayoshi

Dr. Yuya Takane

About the Journal

Message from the Editor-in-Chief

Continued developments in instrumentation and modeling have driven atmospheric science to become increasingly more complex with a deeper understanding of concepts, mechanisms, and interactions. This is the field that innovation built and it has led to a better appreciation for the complexity with atmosphere. Human life is intertwined in this complexity as we strive to better understand our atmosphere. Climate change is constantly stretching the limits of our thinking and forcing new ideas and concepts to be played out. Welcome to the Anthropocene!

Editor-in-Chief

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), Ei Compendex, GEOBASE, GeoRef, Inspec, CAPlus / SciFinder, Astrophysics Data System, and other databases.

Journal Rank:

CiteScore - Q2 (Environmental Science (miscellaneous))
