

Special Issue

Improving Extreme Precipitation Simulation

Message from the Guest Editors

In recognition of these urgent needs to improve model skill in capturing extreme precipitation, the open-access journal *Atmosphere* is hosting a Special Issue to showcase the most recent findings related to extreme precipitation simulation, model improvement, parameterization scheme development, and process understanding. This Special Issue aims to highlight the most recent developments, techniques, and physical understandings, as well as new evidence from observations. We also encourage relevant studies assessing the societal effects of extreme precipitation based on numerical model results. Original results from model studies, model evaluation, model development, surveys, and review papers related to extreme precipitation are all welcome contributions. Authors are encouraged to include a section touching on future issues, opportunities, and/or concerns related to their topics, on the 5-, 10-, and 20-year horizons.

About the Journal

Message from the Editor-in-Chief

Continued developments in instrumentation and modeling have driven atmospheric science to become increasingly more complex with a deeper understanding of concepts, mechanisms, and interactions. This is the field that innovation built and it has led to a better appreciation for the complexity with atmosphere. Human life is intertwined in this complexity as we strive to better understand our atmosphere. Climate change is constantly stretching the limits of our thinking and forcing new ideas and concepts to be played out. Welcome to the Anthropocene!

Editor-in-Chief

Dr. Daniele Contini

Institute of Atmospheric Sciences and Climate (ISAC), National Research Council (CNR), Str. Prv. Lecce-Monteroni km 1.2, 73100 Lecce, Italy

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), Ei Compendex, GEOBASE, GeoRef, Inspec, CAPlus / SciFinder, Astrophysics Data System, and other databases.

Journal Rank:

CiteScore - Q2 (Environmental Science (miscellaneous))
