

Special Issue

Human–Building Nexus: Indoor Environmental Quality and Human Health during the COVID-19 Pandemic

Message from the Guest Editors

This Special Issue of *Atmosphere* will collect research efforts exploring the relationship between indoor environment quality and human health in the context of the COVID-19 pandemic. We invite studies of both the change of indoor environmental quality due to COVID-19 measures and the impact of indoor environmental quality on COVID-19 transmission. Studies can be based on laboratory and climate chambers, field monitoring, simulation, and surveys. We also welcome review and position papers.

About the Journal

Message from the Editor-in-Chief

Continued developments in instrumentation and modeling have driven atmospheric science to become increasingly more complex with a deeper understanding of concepts, mechanisms, and interactions. This is the field that innovation built and it has led to a better appreciation for the complexity with atmosphere. Human life is intertwined in this complexity as we strive to better understand our atmosphere. Climate change is constantly stretching the limits of our thinking and forcing new ideas and concepts to be played out. Welcome to the Anthropocene!

Editor-in-Chief

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), Ei Compendex, GEOBASE, GeoRef, Inspec, CAPlus / SciFinder, Astrophysics Data System, and other databases.

Journal Rank:

CiteScore - Q2 (Environmental Science (miscellaneous))
