

Special Issue

Lightning Flashes: Detection, Forecasting and Hazards

Message from the Guest Editors

Severe storms that usually produce high lightning activity are responsible for hundreds of deaths and billions of dollars of damage annually worldwide. The almost real-time detection of lightning activity is important for a wide variety of applications and for the development of new nowcasting techniques. Climatological lightning data are also essential to understand humanity's influence on the climate and, conversely, how these climate changes can affect the behavior of severe storms in the long term. Accessing the impacts of severe storms on the population will help us to understand its vulnerabilities, leading to more effective mitigation and adaptation actions. Based on this discussion, we are planning a Special Issue dedicated to multi-disciplinary contributions in all areas related to lightning: detection techniques and/or systems, nowcasting and/or forecasting methods, hazard characterization, severe storm signatures and life cycle development (micro-physics, electrification, thermodynamics, and dynamics). We welcome contributions of various article types such as original research and reviews.

Guest Editors

Dr. Kleber Pinheiro Naccarato

Division of Meteorological Sensors and Satellites, General Coordination of Earth Sciences, National Institute for Space Research (INPE), Sao Jose dos Campos 12227-010, Brazil

Dr. Ana Paula Paes Dos Santos

Vale Institute of Technology Sustainable Development (ITV DS) - Environmental Technology Group, Belém 66055-090, Brazil

Deadline for manuscript submissions

closed (30 May 2023)

About the Journal

Message from the Editor-in-Chief

Continued developments in instrumentation and modeling have driven atmospheric science to become increasingly more complex with a deeper understanding of concepts, mechanisms, and interactions. This is the field that innovation built and it has led to a better appreciation for the complexity with atmosphere. Human life is intertwined in this complexity as we strive to better understand our atmosphere. Climate change is constantly stretching the limits of our thinking and forcing new ideas and concepts to be played out. Welcome to the Anthropocene!

Editor-in-Chief

Dr. Daniele Contini

Institute of Atmospheric Sciences and Climate (ISAC), National Research Council (CNR), Str. Prv. Lecce-Monteroni km 1.2, 73100 Lecce, Italy

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), Ei Compendex, GEOBASE, GeoRef, Inspec, CAPlus / SciFinder, Astrophysics Data System, and other databases.

Journal Rank:

CiteScore - Q2 (Environmental Science (miscellaneous))
