Advances in Understanding Aerosols Filtration

Message from the Guest Editor

Over the last century, the effect of the air quality on human activities has been demonstrated beyond any doubt. Airborne contaminant impacts machinery lifetime, human health, and many aspect of everyday life. To avoid unwanted effects induced by poor air quality, filtration technologies are widely used and continuously improved. The need for reliable and efficient technologies is a real issue for a very wide range of uses, from general high flowrate ventilation systems to personal protective devices or small electronic cooling. This Special Issue aims to gather original works, new approaches, and scientific reviews on air filtration-related topics. Experimental, numerical, and original approaches to design, understand, or improve current knowledges on this thematic are welcome.

About the Journal

Message from the Editor-in-Chief

Continued developments in instrumentation and modeling have driven atmospheric science to become increasingly more complex with a deeper understanding of concepts, mechanisms, and interactions. This is the field that innovation built and it has led to a better appreciation for the complexity with atmosphere. Human life is intertwined in this complexity as we strive to better understand our atmosphere. Climate change is constantly stretching the limits of our thinking and forcing new ideas and concepts to be played out. Welcome to the Anthropocene!

Editor-in-Chief

Dr. Daniele Contini

Institute of Atmospheric Sciences and Climate (ISAC), National Research Council (CNR), Str. Prv. Lecce-Monteroni km 1.2, 73100 Lecce, Italy

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), Ei Compendex, GEOBASE, GeoRef, Inspec, CAPlus / SciFinder, Astrophysics Data System, and other databases.

Journal Rank:

CiteScore - Q2 (Environmental Science (miscellaneous))
