# **Special Issue**

## Air Quality, Health and Environmental Impact Assessment

## Message from the Guest Editors

The aim of this Special Issue is to collate the most recent advances in the study of atmospheric pollution and its impacts. For over two years, the COVID-19 pandemic has strongly focused our attention on the link between pollution and health and encouraged debates regarding the role of air pollution as a booster or carrier of the virus. The climate crisis also raises questions on the increasing trend of pollutant concentrations in the near future and the possible consequences of this on public health and ecosystems. The Issue is to collect original research on air pollution modeling and measurements, the assessment of impacts on public health and natural environments, and the effectiveness of technological and non-technological solutions to be transformed into policies. We await contributions that focus on the comparison and integrations of models and measurements, the assimilation of satellite data or the use of artificial intelligence techniques. We would be happy to publish studies on the effectiveness of natural solutions as a stable solution to improve air quality and microclimates.

## **About the Journal**

## Message from the Editor-in-Chief

Continued developments in instrumentation and modeling have driven atmospheric science to become increasingly more complex with a deeper understanding of concepts, mechanisms, and interactions. This is the field that innovation built and it has led to a better appreciation for the complexity with atmosphere. Human life is intertwined in this complexity as we strive to better understand our atmosphere. Climate change is constantly stretching the limits of our thinking and forcing new ideas and concepts to be played out. Welcome to the Anthropocene!

#### Editor-in-Chief

Dr. Daniele Contini

Institute of Atmospheric Sciences and Climate (ISAC), National Research Council (CNR), Str. Prv. Lecce-Monteroni km 1.2, 73100 Lecce, Italy

#### **Author Benefits**

#### Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

## **High Visibility:**

indexed within Scopus, SCIE (Web of Science), Ei Compendex, GEOBASE, GeoRef, Inspec, CAPlus / SciFinder, Astrophysics Data System, and other databases.

#### Journal Rank:

CiteScore - Q2 (Environmental Science (miscellaneous))
