Air Pollution in Japan

Message from the Guest Editors

In Japan, serious air pollution has been apparent since around the 1950s, but local air pollution has greatly improved, mainly due to the progress of institutional and technical measures since the 1970s. However, the appearance of air pollution in Japan is changing due to the influence of air pollution sources in Asia, and also due to global climate change. In order to record Japan's atmospheric environment passage of time and to identify what we are going to face in the future, we invite papers in our latest Special Issue, "Air Pollution in Japan", which focus on air pollution trends throughout Japan or in each region of Japan over the past 30 years, the effects of countermeasures, analysis of the latest atmospheric environment, etc.

About the Journal

Message from the Editor-in-Chief

Continued developments in instrumentation and modeling have driven atmospheric science to become increasingly more complex with a deeper understanding of concepts, mechanisms, and interactions. This is the field that innovation built and it has led to a better appreciation for the complexity with atmosphere. Human life is intertwined in this complexity as we strive to better understand our atmosphere. Climate change is constantly stretching the limits of our thinking and forcing new ideas and concepts to be played out. Welcome to the Anthropocene!

Editor-in-Chief

Dr. Daniele Contini

Institute of Atmospheric Sciences and Climate (ISAC), National Research Council (CNR), Str. Prv. Lecce-Monteroni km 1.2, 73100 Lecce, Italy

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), Ei Compendex, GEOBASE, GeoRef, Inspec, CAPlus / SciFinder, Astrophysics Data System, and other databases.

Journal Rank:

CiteScore - Q2 (Environmental Science (miscellaneous))
