

Special Issue

Biomass Combustion: Emissions, High-Temperature Aerosols, and Atmospheric Impact

Message from the Guest Editors

Atmosphere is hosting a Special Issue to showcase the most recent studies and activities on biomass combustion's effects on the atmosphere. The Special issue aims to collect studies that help to better understand the consequences of biomass combustion in boilers (through the study of emissive models, development of new abatement systems, determination of emission factors, etc.) and in open burning phenomena, thus highlighting how this latter practice is harmful to the environment and humans. The study of the emissions of macro pollutants, greenhouse gases, PM, heavy metals, POPs, carbon particles, and high-temperature aerosols in relation to combustion conditions and chemical-physical characteristics of biomass, or reviews of these studies, are the main topics of this Special Issue. The topics discussed represent a scientific basis on which to take important actions for the global energy sustainability of the future in harmony with the environment.

Guest Editors

Dr. Enrico Paris
Dr. Monica Carnevale
Dr. Francesco Gallucci

Deadline for manuscript submissions

About the Journal

Message from the Editor-in-Chief

Continued developments in instrumentation and modeling have driven atmospheric science to become increasingly more complex with a deeper understanding of concepts, mechanisms, and interactions. This is the field that innovation built and it has led to a better appreciation for the complexity with atmosphere. Human life is intertwined in this complexity as we strive to better understand our atmosphere. Climate change is constantly stretching the limits of our thinking and forcing new ideas and concepts to be played out. Welcome to the Anthropocene!

Editor-in-Chief

Dr. Daniele Contini

Institute of Atmospheric Sciences and Climate (ISAC), National Research Council (CNR), Str. Prv. Lecce-Monteroni km 1.2, 73100 Lecce, Italy

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), Ei Compendex, GEOBASE, GeoRef, Inspec, CAPlus / SciFinder, Astrophysics Data System, and other databases.

Journal Rank:

CiteScore - Q2 (Environmental Science (miscellaneous))
