

Special Issue

Storm Surge Modeling – Capturing the Wind

Message from the Guest Editor

We specifically encourage submissions involving the following topics:

- Boundary layer interactions including momentum transfer, wind drag, and aerodynamic roughness characterization;
- Quantification of the uncertainty associated with air/sea interaction;
- Computational methods for wind-driven surge simulation including advances to high performance distributed computing architecture, data assimilation, and machine learning;
- Parameterization and validation techniques based on in-situ sensor measurements, remote sensing, photogrammetry, etc.;
- Innovative metrics to assess model performance.

About the Journal

Message from the Editor-in-Chief

Continued developments in instrumentation and modeling have driven atmospheric science to become increasingly more complex with a deeper understanding of concepts, mechanisms, and interactions. This is the field that innovation built and it has led to a better appreciation for the complexity with atmosphere. Human life is intertwined in this complexity as we strive to better understand our atmosphere. Climate change is constantly stretching the limits of our thinking and forcing new ideas and concepts to be played out. Welcome to the Anthropocene!

Editor-in-Chief

Dr. Daniele Contini

Institute of Atmospheric Sciences and Climate (ISAC), National Research Council (CNR), Str. Prv. Lecce-Monteroni km 1.2, 73100 Lecce, Italy

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), Ei Compendex, GEOBASE, GeoRef, Inspec, CAPlus / SciFinder, Astrophysics Data System, and other databases.

Journal Rank:

CiteScore - Q2 (Environmental Science (miscellaneous))
