Special Issue

Physics of Flow and Transport in Urban Canopy Layers

Message from the Guest Editors

This Special Issue of Atmosphere focuses on the flow and transport of energy, water, greenhouse gases, and pollutants in urban canopy layers. We invite you to contribute to this Special Issue with your state-of-the-art research endeavors to further our fundamental understanding of the physics and thermodynamics of flow over complex built terrains, and more importantly, to inform and foster sustainable urban environment management and policy-making processes in the long run. We solicit original research papers, reviews, and perspectives on all topics related to urban atmospheric studies, with an impact on local hydrometeorological changes as well as regional and global environmenthealth-climate repercussions. Specific topics include but are not limited to observations and numerical simulations of urban flow field, exchange of energy, water, and scalars in the land-atmosphere continuum, and the underlying dynamics of the urban heat island, air pollution, and hydroclimate changes.

About the Journal

Message from the Editor-in-Chief

Continued developments in instrumentation and modeling have driven atmospheric science to become increasingly more complex with a deeper understanding of concepts, mechanisms, and interactions. This is the field that innovation built and it has led to a better appreciation for the complexity with atmosphere. Human life is intertwined in this complexity as we strive to better understand our atmosphere. Climate change is constantly stretching the limits of our thinking and forcing new ideas and concepts to be played out. Welcome to the Anthropocene!

Editor-in-Chief

Dr. Daniele Contini Institute of Atmospheric Sciences and Climate (ISAC), National Research Council (CNR), Str. Prv. Lecce-Monteroni km 1.2, 73100 Lecce, Italy

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), Ei Compendex, GEOBASE, GeoRef, Inspec, CAPlus / SciFinder, Astrophysics Data System, and other databases.

Journal Rank:

CiteScore - Q2 (Environmental Science (miscellaneous))
