Smart Remanufacturing

Guest Editors:

Prof. Dr. Zude Zhou

Prof. Dr. Quan Liu

Prof. Dr. Wenjun Xu

Prof. Dr. F. Javier Ramírez

Dr. Marcello Fera

Dr. Mario Caterino

Prof. Dr. Duc Truong Pham

Deadline for manuscript submissions:
31 July 2024

Message from the Guest Editors

Dear Colleagues,

Remanufacturing is the process of returning a product that has reached the end of its service life to a condition at least as good as that of the original product. Remanufacturing is part of a circular economy aimed at minimising waste and conserving raw materials and energy, while also cutting greenhouse gas emissions and landfill space requirements. By saving input costs, remanufacturing can yield more affordable products and wider profit margins at the same time. Thus, remanufacturing is good for consumers and producers as well as for the environment; in this sense, remanufacturing is intrinsically smart manufacturing. While many original equipment manufacturers have embraced modern solutions such as digital twins, cyber–physical systems, artificial intelligence, smart sensors, big data and autonomous collaborative robots, remanufacturers tend to utilise tools and techniques from the last century.

This Special Issue will look at how smart manufacturing technologies or any other advanced technologies can be directly employed or adapted to make remanufacturing technologically smarter.

Message from the Editor-in-Chief

Automation (ISSN 2673-4052) is a international peer-reviewed open access journal devoted to fast publication of the latest achievements of technological developments and scientific research in the huge area of automation and control system. Both experimental and theoretical papers are published, including all aspects of manufacturing systems, energy management systems, aerospace control systems, micro- and nano-systems, learning systems, intelligent control systems and so on. Automation organizes Special Issues devoted to specific automation and controlling areas and applications each year.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.
High Visibility: indexed within ESCI (Web of Science), Scopus, EBSCO, and other databases.
Reliable Service: rigorous peer review and professional production.
