**Message from the Guest Editors**

Neutrosophic sets are gaining significant attention in solving many real life problems that involve uncertainty, impreciseness, vagueness, incompleteness, inconsistent, and indeterminacy. As a consequence topological ideas have been defined and studied on neutrosophic sets, giving birth to Neutrosophic Topology.

Neutrosophic logic, set, probability, statistics, etc., are, respectively, generalizations of fuzzy and intuitionistic fuzzy logic and set, classical and imprecise probability, and classical statistics and so on. For more information see the University of New Mexico website:

http://fs.gallup.unm.edu/neutrosophy.htm

We invite you to contribute papers on neutrosophic topologies and their applications to this Special Issue of the international journal *Axioms*, which is a Scopus and ESCI journal.

Deadline for manuscript submissions:  
closed (30 January 2019)
