

## Special Issue

# Complex Variables in Quantum Gravity

### Message from the Guest Editor

This Special Issue is dedicated to the application of integral transformations to calculations of Green functions and scattering amplitudes in quantum gravity via the utilization of complex analysis, the Cauchy integral formula, the residue calculus technique and complex mapping. The Slavnov–Taylor identity relates different Green functions of quantum fields in gravity as well as in the Yang–Mills theory. In turn, the Slavnov–Taylor identity follows from the BRST symmetry of the classical action extended by certain additional terms. For the classical action, the BRST symmetry coincides with gauge symmetry. In gravitational theory, the gauge symmetry is represented by diffeomorphisms. The Green functions are defined in terms of the path integral whose measure is invariant with respect to BRST transformations. As a result of this BRST invariance, the Slavnov–Taylor identity appears in gravity. Although the aim of this Special Issue is to publish original research articles on higher loop calculations in quantum gravity, focused on integral transformations involving complex variables, review articles on this subject are also welcome.

### Guest Editor

Dr. Igor Kondrashuk

Grupo de Matemática Aplicada & Grupo de Física de Altas Energías & Centro de Ciencias Exactas & Departamento de Ciencias Básicas, Universidad del Bío-Bío, Campus Fernando May, Av. Andres Bello 720, Casilla 447, Chillán 3780227, Chile

### Deadline for manuscript submissions

30 April 2026

## About the Journal

### Message from the Editor-in-Chief

*Axioms* is dedicated to the foundations (structure and axiomatic basis, in particular) of mathematical theories, not only from a crisp or strictly classical sense, but also from a fuzzy and generalized sense. This includes the more innovative current scientific trends, devoted to discover and solve new challenging problems. The prime goal of *Axioms* is to publish first-class, original research articles under an open access policy with minimal fees for the authors. We would be pleased to welcome you as one of our authors.

### Author Benefits

#### Open Access

— free for readers, with article processing charges (APC) paid by authors or their institutions.

#### High visibility:

indexed within SCIE (Web of Science), dblp, and other databases.

#### Journal Rank:

JCR - Q2 (Mathematics, Applied)
