# Special Issue

# Advances in Fractional-Order Difference and Differential Equations

## Message from the Guest Editors

Fractional-order difference and differential equations serve as robust tools for modeling, analyzing, and controlling systems characterized by memory effects, non-local interactions, and complex dynamic behavior, making them essential in contemporary applied mathematics and engineering. This Special Issue, "Advances in Fractional-Order Difference and Differential Equations", functions as a focused knowledge platform, facilitating the development and application of advanced methodologies while fostering collaboration and knowledge exchange within the global research community. Topics include but are not limited to:

- fractional calculus
- non-integer order systems
- memory effects
- non-local operators
- anomalous diffusion
- hereditary systems
- control systems
- signal processing
- viscoelastic materials
- biological systems
- heat and mass transfer
- financial modeling
- image processing
- epidemiological modeling
- discrete dynamical systems
- operator theory
- stability analysis
- existence and uniqueness
- Laplace transform method
- Adomian decomposition
- finite difference schemes
- predictor-corrector method

## **About the Journal**

## Message from the Editor-in-Chief

Axioms is dedicated to the foundations (structure and axiomatic basis, in particular) of mathematical theories, not only from a crisp or strictly classical sense, but also from a fuzzy and generalized sense. This includes the more innovative current scientific trends, devoted to discover and solve new challenging problems. The prime goal of Axioms is to publish first-class, original research articles under an open access policy with minimal fees for the authors. We would be pleased to welcome you as one of our authors.

### Editor-in-Chief

### Prof. Dr. Humberto Bustince

Department of Statistics, Computer Science and Mathematics, Public University of Navarra, 31006 Pamplona, Spain

#### **Author Benefits**

#### **Open Access**

 free for readers, with article processing charges (APC) paid by authors or their institutions.

## **High visibility:**

indexed within SCIE (Web of Science), dblp, and other databases.

### Journal Rank:

JCR - Q2 (Mathematics, Applied)
