Mathematical Fuzzy Logic in the Emerging Fields of Engineering, Finance, and Computer Sciences

Message from the Guest Editor

With more than 50 years of literature, fuzzy logic has gradually progressed from an emerging field to a developed research domain, encompassing the subdomain of **mathematical fuzzy logic (MFL)** which targets the many-valued logics and has significantly contributed to the logical foundations of fuzzy set theory (FST). Indeed, thanks to the strong interest from researchers, the literature on the modelling and theory of MFL has expanded rapidly, improving our understanding of this domain and enabling to target a wide range of complex problems in many applicative contexts ranging from the medical sciences to finance, commerce, engineering, and computer sciences.

About the Journal

Message from the Editor-in-Chief

Axioms is dedicated to the foundations (structure and axiomatic basis, in particular) of mathematical theories, not only from a crisp or strictly classical sense, but also from a fuzzy and generalized sense. This includes the more innovative current scientific trends, devoted to discover and solve new challenging problems. The prime goal of *Axioms* is to publish first-class, original research articles under an open access policy with minimal fees for the authors. We would be pleased to welcome you as one of our authors.

Editor-in-Chief

Prof. Dr. Humberto Bustince

Department of Statistics, Computer Science and Mathematics, Public
University of Navarra, 31006 Pamplona, Spain

Author Benefits

Open Access

— free for readers, with article processing charges (APC) paid by authors or their institutions.
