

## Special Issue

# Mathematical Methods in the Applied Sciences

### Message from the Guest Editors

The applied sciences include a broad range of disciplines, such as engineering, business, medicine, neuroscience, Earth science, etc. It is often contrasted with basic science, which is focused on advancing scientific theories and laws that explain and predict events in the natural world. Many problems related to the applied sciences are resolved mathematically, hence the need to explore and search for adequate mathematical methods to accurately describe and explain real-world phenomena. These mathematical methods can be expressed using linear, non-linear, ordinary differential and partial differential equations. The aim of this Special Issue is to give scientists and researchers the opportunity to present their works, including but not limited to:

- mathematical methods;
- applied mathematics;
- biomathematics;
- modeling;
- applied sciences;
- real systems;
- applied mechanics;
- quantitative models;
- simulation methodology;
- inverse problems;
- numerical methods;
- machine learning;
- deep learning;
- reinforcement learning.

## About the Journal

### Message from the Editor-in-Chief

*Axioms* is dedicated to the foundations (structure and axiomatic basis, in particular) of mathematical theories, not only from a crisp or strictly classical sense, but also from a fuzzy and generalized sense. This includes the more innovative current scientific trends, devoted to discover and solve new challenging problems. The prime goal of *Axioms* is to publish first-class, original research articles under an open access policy with minimal fees for the authors. We would be pleased to welcome you as one of our authors.

---

### Editor-in-Chief

Prof. Dr. Humberto Bustince

Department of Statistics, Computer Science and Mathematics, Public  
University of Navarra, 31006 Pamplona, Spain

---

### Author Benefits

#### Open Access

— free for readers, with article processing charges (APC) paid by authors or their institutions.

#### High visibility:

indexed within SCIE (Web of Science), dblp, and other databases.

#### Journal Rank:

JCR - Q2 (Mathematics, Applied)
