

Special Issue

Applied Optimization for Solving Real-World Problems

Message from the Guest Editors

This Special Issue aims to seek out high-quality articles from industry-related scholars and researchers in the areas of applied optimization in mathematics, economics, business, logistics, production, transportation, supply chain, finance, etc. We are interested in publishing articles that solve the problems of real companies through the development of optimization models. The results of their applications in real practice should be shown, discussed, and analysed. High-quality papers are solicited to address practical issues in the development of efficient mathematical models to represent real-world business problems and their applications along with the solution of a particular problem. Submissions that present new business models with solutions methods and their applications are welcome. Potential topics include, but are not limited to,

- applications of mathematical economics;
- business analytics models;
- financial optimization;
- supply chain optimization;
- business optimization.

About the Journal

Message from the Editor-in-Chief

Axioms is dedicated to the foundations (structure and axiomatic basis, in particular) of mathematical theories, not only from a crisp or strictly classical sense, but also from a fuzzy and generalized sense. This includes the more innovative current scientific trends, devoted to discover and solve new challenging problems. The prime goal of *Axioms* is to publish first-class, original research articles under an open access policy with minimal fees for the authors. We would be pleased to welcome you as one of our authors.

Editor-in-Chief

Prof. Dr. Humberto Bustince
