

Special Issue

Calculus of Variations and Nonlinear Partial Differential Equations

Message from the Guest Editor

The current Special Issue invites studies related to the calculus of variations and nonlinear partial differential equations. More specifically, this Special Issue aims to develop essential tools for solving problems arising in various branches of mathematical analysis, such as variational inequality problems, nonlinear optimization problems, equilibrium problems, complementarity problems, and integral and differential equations. The main objective of this Special Issue is to provide a platform for researchers to report new initiatives and developments in the field of nonlinear analysis, calculus of variations, and partial differential equations. Original research and review articles are welcome.

About the Journal

Message from the Editor-in-Chief

Axioms is dedicated to the foundations (structure and axiomatic basis, in particular) of mathematical theories, not only from a crisp or strictly classical sense, but also from a fuzzy and generalized sense. This includes the more innovative current scientific trends, devoted to discover and solve new challenging problems. The prime goal of *Axioms* is to publish first-class, original research articles under an open access policy with minimal fees for the authors. We would be pleased to welcome you as one of our authors.

Editor-in-Chief

Prof. Dr. Humberto Bustince
